No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A_Geneseq_101002:*

                                                                                                                                                                                                                                                                                                                                             Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a peptide fragment of human complement component C5a (the full-length sequence is given in AAB74053). The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointsstinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as anaphylatoxin.
                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human complement C5a protein derivative analogue 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-SEP-1997 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo. N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence, the human complement C5a derivative 1-64, ThrIMET, Cys27Ser, Asn64Cys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammatory boy injury, post myocardial infarction inflammation, inflammatory boy disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to prevent transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 3; Page -; 93pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21 CCYDGASVNNDETCEQRAAR 40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.

Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo.

N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence, the human complement C5a derivative 1-66, ThriMet, Cys/7Ser, Ser6Cys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory bowel

exhibits no agonist activity. It can be used to treat or prevent
C5a mediated diseases or inflammation, e.g. pneumonitis, adult
respiratory distress syndrome (ARDS), pulmonary inflammation or
injury, post myocardial infarction inflammation, inflammatory bowel
disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis,
severe trauma and burns. It can also be used to treat patients
suffering from transplant rejection, receiving immunosuppressive
therapy or massive blood transfusion, exposed to medical devices
or experiencing pulmonary dysfunction following haemodialysis or
leukopheresis. It can also be used as a prophylactic, particularly
in conditions caused by reperfusion, e.g. reperfusion following
ischaemia, and circulatory contact with medical devices, as well as
to prevent transplant rejection.

                                         disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as
                                                                                                                                                                      exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         adult respiratory distress syndrome: ARDS; pulmonary; injury; post myocardial; infarction; inflammatory bowel; endoctoxic sho rheumatoid arthritis; psoriasis; sepsis; transplant rejection; immunosuppressive therapy; blood transfusion; dysfunction;
              Antibodies against the derivative can be used to detect or quantify
                               to prevent transplant rejection.
                                                                                                                                                                                                                                 The present sequence, the human complement C5a derivative 1-70, ThriMet, Cys27Ser, Met70Cys, is a C5a receptor antagonist which

                       The present sequence, the human complement C5a derivative 1-71, ThrIGIY, Cys27Ser, Gln7lCys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory bowel
disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsevere trauma and burns. It can also be used to treat patients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                          haemodialysis; leukopheresis; prophylaxis; reperfusion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            bowel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection. Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo. N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection. Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo. N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 adult respiratory distress syndrome (ARDS), pulmonary inflammatic or injury, post myocardial infarction inflammation, inflammatory bowel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed in

It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.

Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence, the human complement C5a derivative 1-71, Thr1Met, Cys27Ser, G1n71Cys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory bowel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients enforcements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-JUN-1995;

The present sequence, the human complement C5a derivative 1-72, Thilmet, Cys27Ser, Leu72Cys, is a C5a receptor antagonist which can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult C5a mediated diseases or inflammation, e.g. pneumonitis, adult C5a mediated diseases or inflammation, inflammation or C injury, post myocardial infarction inflammation, inflammatory bowel C6 disease, rheunatoid arthritis, psoriasis, endotoxic shock, sepsis, C7 consists, and carchitis, province to treat patients C8 severe trauma and burns. It can also be used to treat patients C9 confering from transplant rejection, receiving immunosuppressive C9 conserved to medical devices C9 consistions caused by suffering following haemodialysis or C9 conditions caused by reperfusion, e.g. reperfusion following C9 ischaemia, and circulatory contact with medical devices, as well as C9 conditions caused by reperfusion, e.g. reperfusion following C9 ischaemia, and circulatory contact with medical devices, as well as C9 conditions against the derivative can be used to detect or quantify the derivative and modify. e.g. neutralise. its activity in vivo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is human complement component CSa. The present invention relates to an antibody specific for the present sequence. The CSa-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the CSa antibody can be used for treating sepsis. CSa is also known as anaphylatoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Compositions for treating blood-borne and toxin mediated diseases and treatment of sepsis in humans and other animals comprises anti-C5a antibodies generated against C-terminal truncated C5a peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                                                                                                                                                                                                                                                                                        Compositions for treating blood-borne and toxin mediated diseases and treatment of sepsis in humans and other animals comprises anti-C5a antibodies generated against C-terminal truncated C5a peptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-487-283A-2
                                               GENERAL INFORMATION:
APPLICANT: Hugl1, TONY E.
APPLICANT: Hugl1, TONY E.
TITLE OF INVENTION: Substrates for Assessing Mannan-Binding
TITLE OF INVENTION: Protein-Associated Serine Protease Activity and Methods
TITLE OF INVENTION: Using the Substrates
FILE REFERENCE: 24730-2204
CURRENT APPLICATION NUMBER: US/09/246,500B
CURRENT FILING DATE: 1999-02-08
NUMBER OF SEQ ID NOS: 19
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 12
LENGTH: 74

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  when injected centrally in mice and rats. It targets neuronal naches in mammals. It blocks homomeric alpha-7 nicotinic receptors with the highest apparent affinity and homomeric alpha-9 receptors with 8-fold lower affinity. It has no effect on receptors composed of alpha-2/beta-2, alpha-3/beta-2, alpha-4/beta-2, alpha-4/beta-4, or alpha-4/beta-4 subunit combinations.

SUBCELLULAR LOCATION: Secreted.
SUBCELLULAR LOCATION: Expressed by the venom duct.
